

Assignment 1

Q1) check no is even or odd

→ Algorithm -

- 1) start
- 2) get input
- 3) Check whether it is odd or even using $\text{num} \% 2 == 0$
- 4) if true. print even No. Else print odd no.
- 5) stop

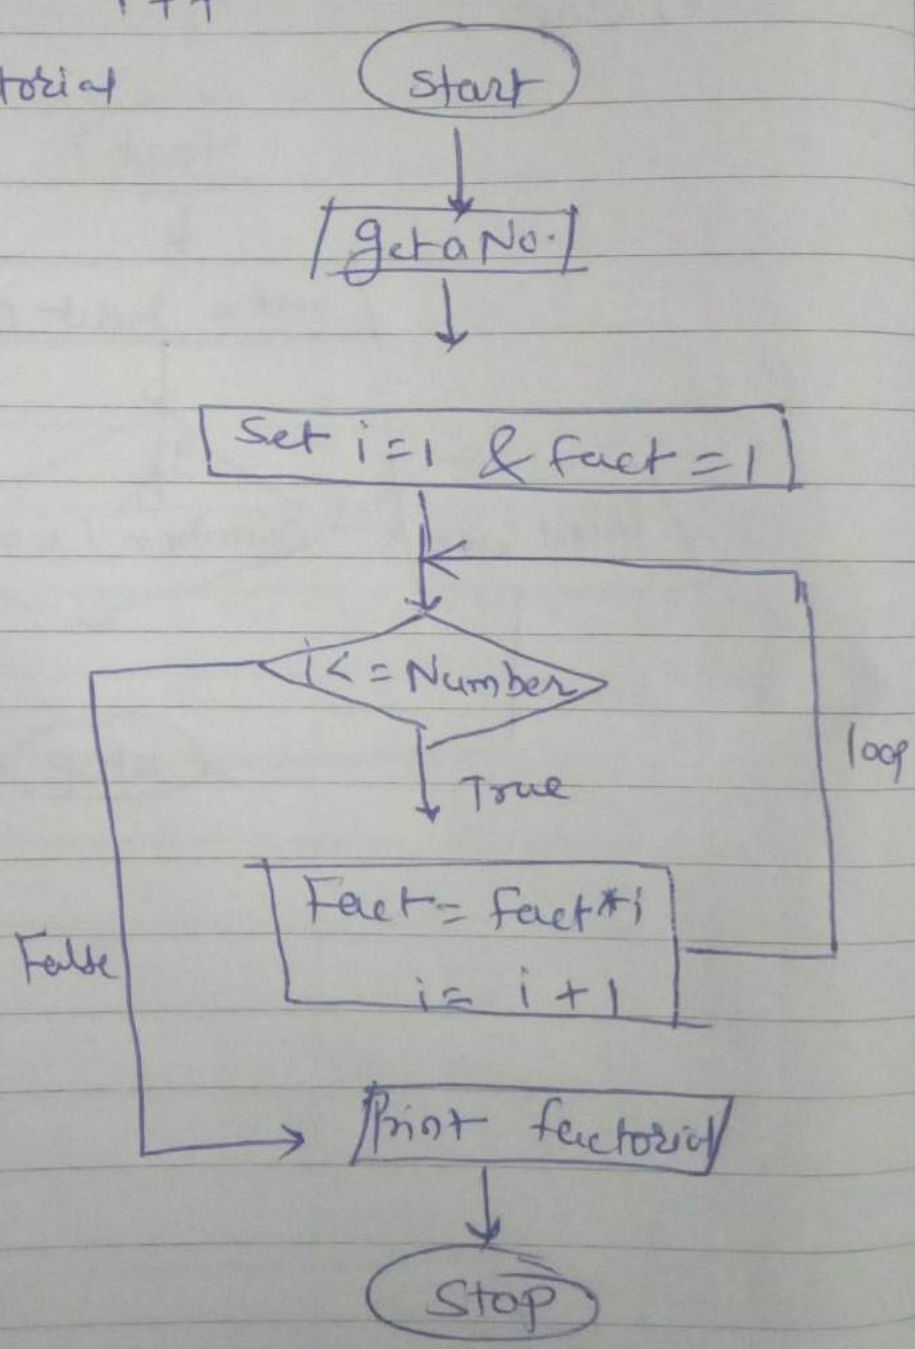

Q2) factorial of given Number.
→

Algorithm:-

- 1) Start
- 2) Declare variable num, fact = 1, i = 1
- 3) get a input number
- 4) Repeat until $i \leq \text{num}$
 $\text{Fact} = \text{fact} * i$
 $i++$

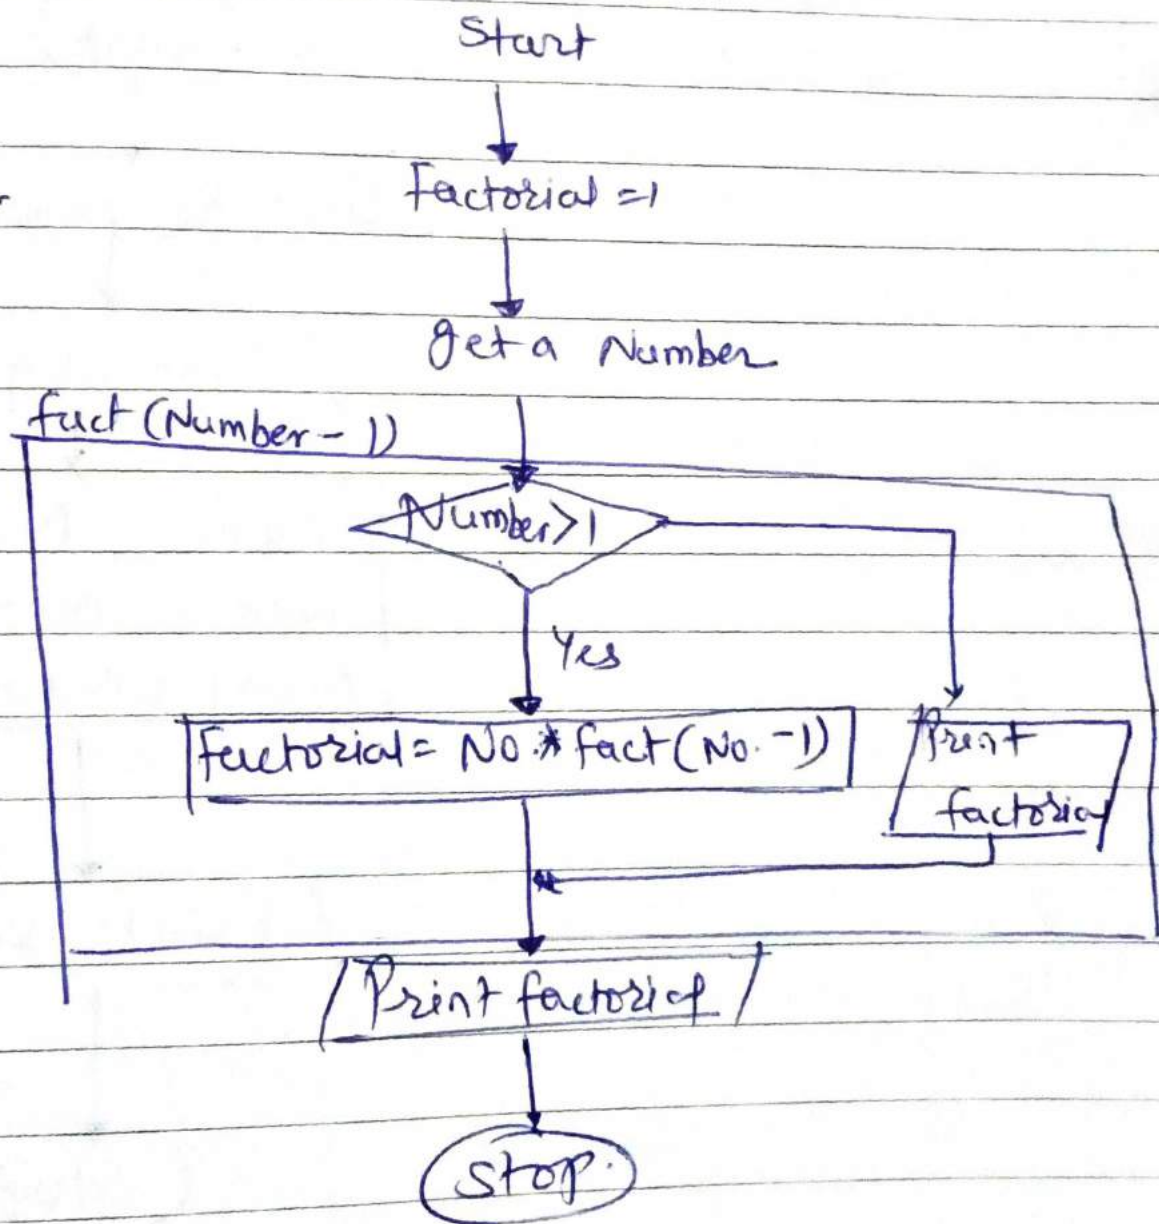

- 5) Print factorial
 - 6) stop
- Flowchart

03) Factorial Using recursion.
→ Algorithm.

- 1) Start
- 2) Declare variable fact = 1
- 3) Get a number from user
- 4) Call method facto
recursively Until value of Number > 1
- 5) Print factorial
- 6) Stop.

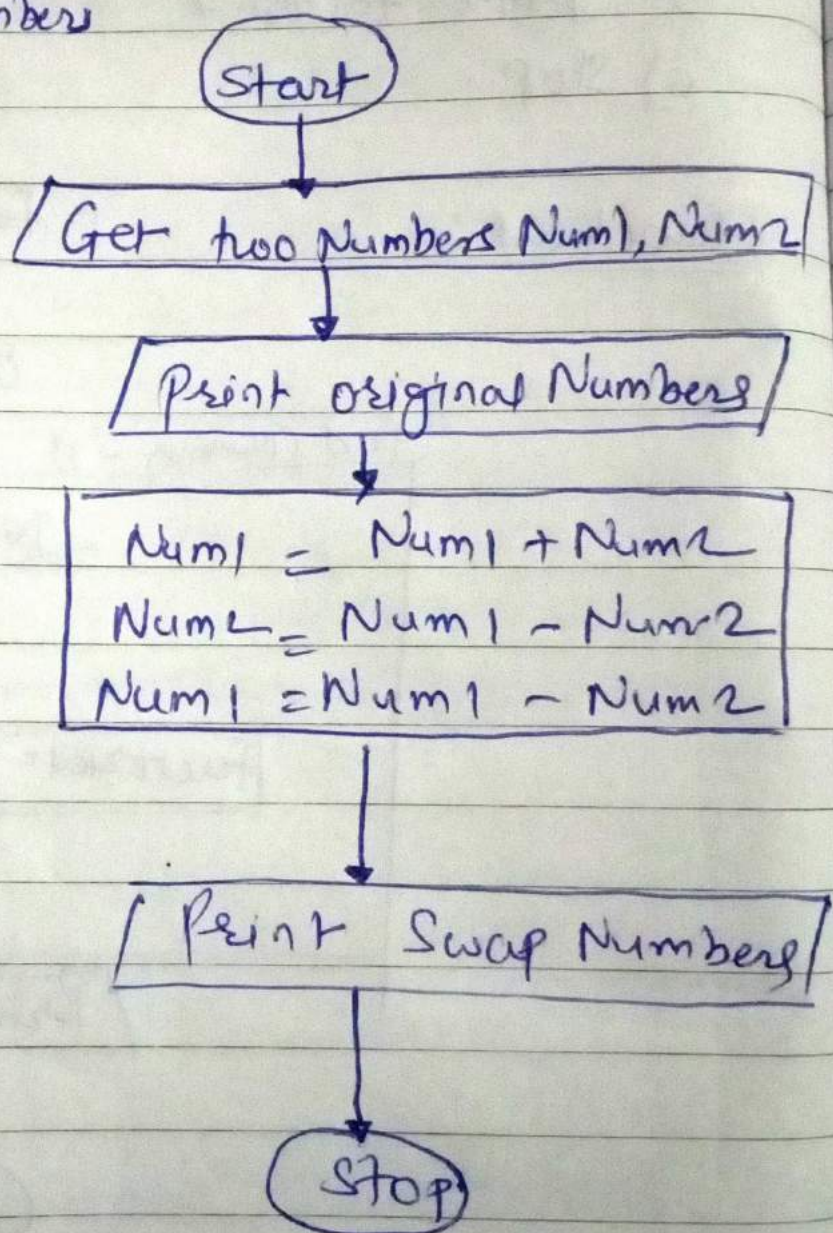

Flowchart:-

Q4) Swap 2 Numbers without using third variable

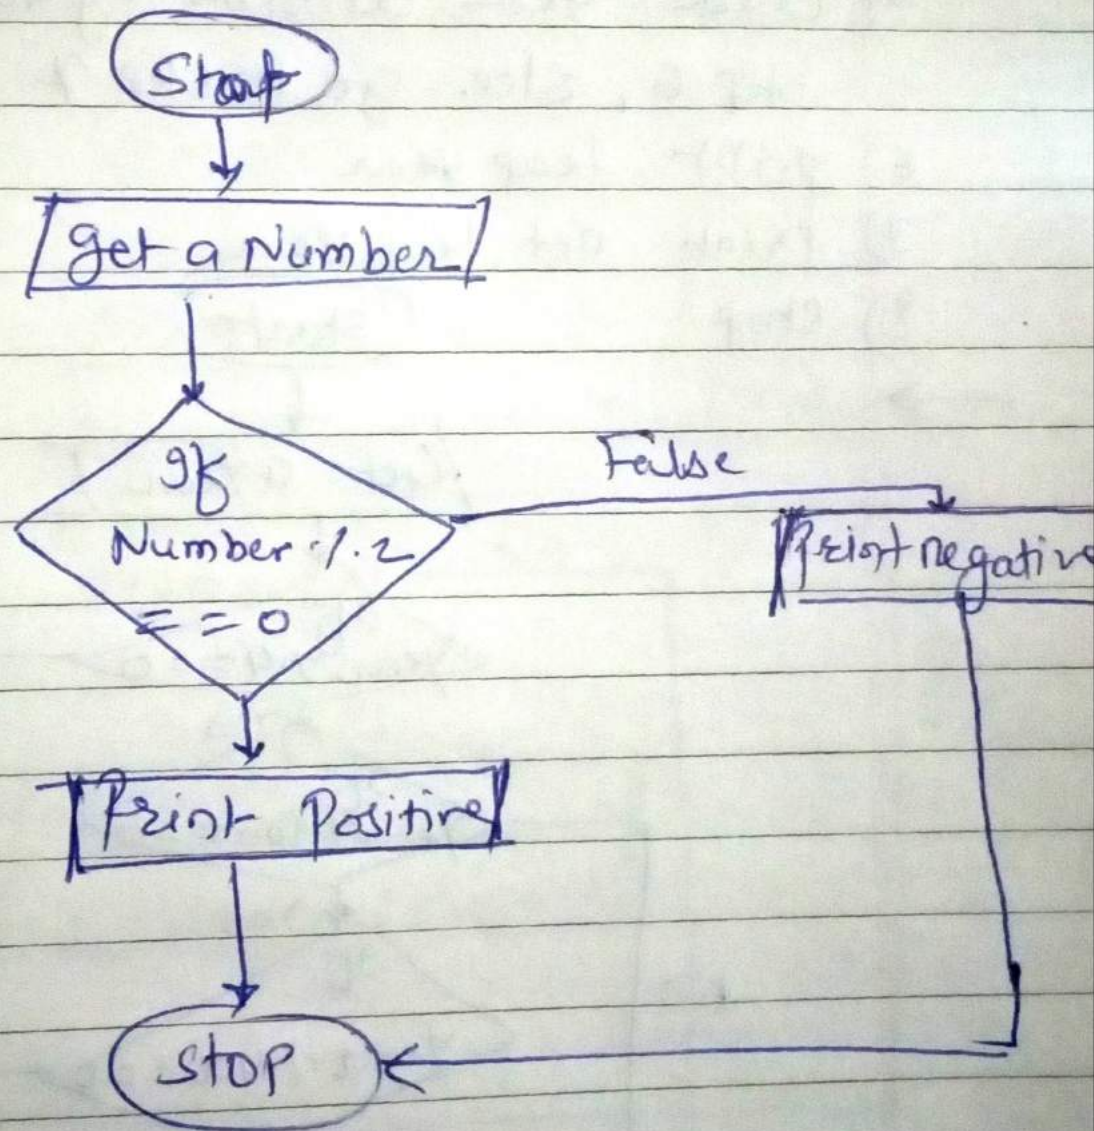

- 1) start
- 2) get two numbers Num1, Num2;
- 3) print Unswap Numbers
$$\text{Num1} = \text{Num1} + \text{Num2}$$
$$\text{Num2} = \text{Num1} - \text{Num2}$$
$$\text{Num1} = \text{Num1} - \text{Num2}$$
- 4) print swap Numbers
- 5) stop

Q5) check given No. whether it is positive or Negative
→ Algorithm;

- 1) stop
- 2) get a Number
- 3) Check $\text{Number} \% 2 == 0$
- 4) If true, Print Positive
Else Print Negative
- 5) stop

Q6) Leap Year

→ start

2) get a input year

3) check Year divisible 4, if true go to step 4
Else go to step 7

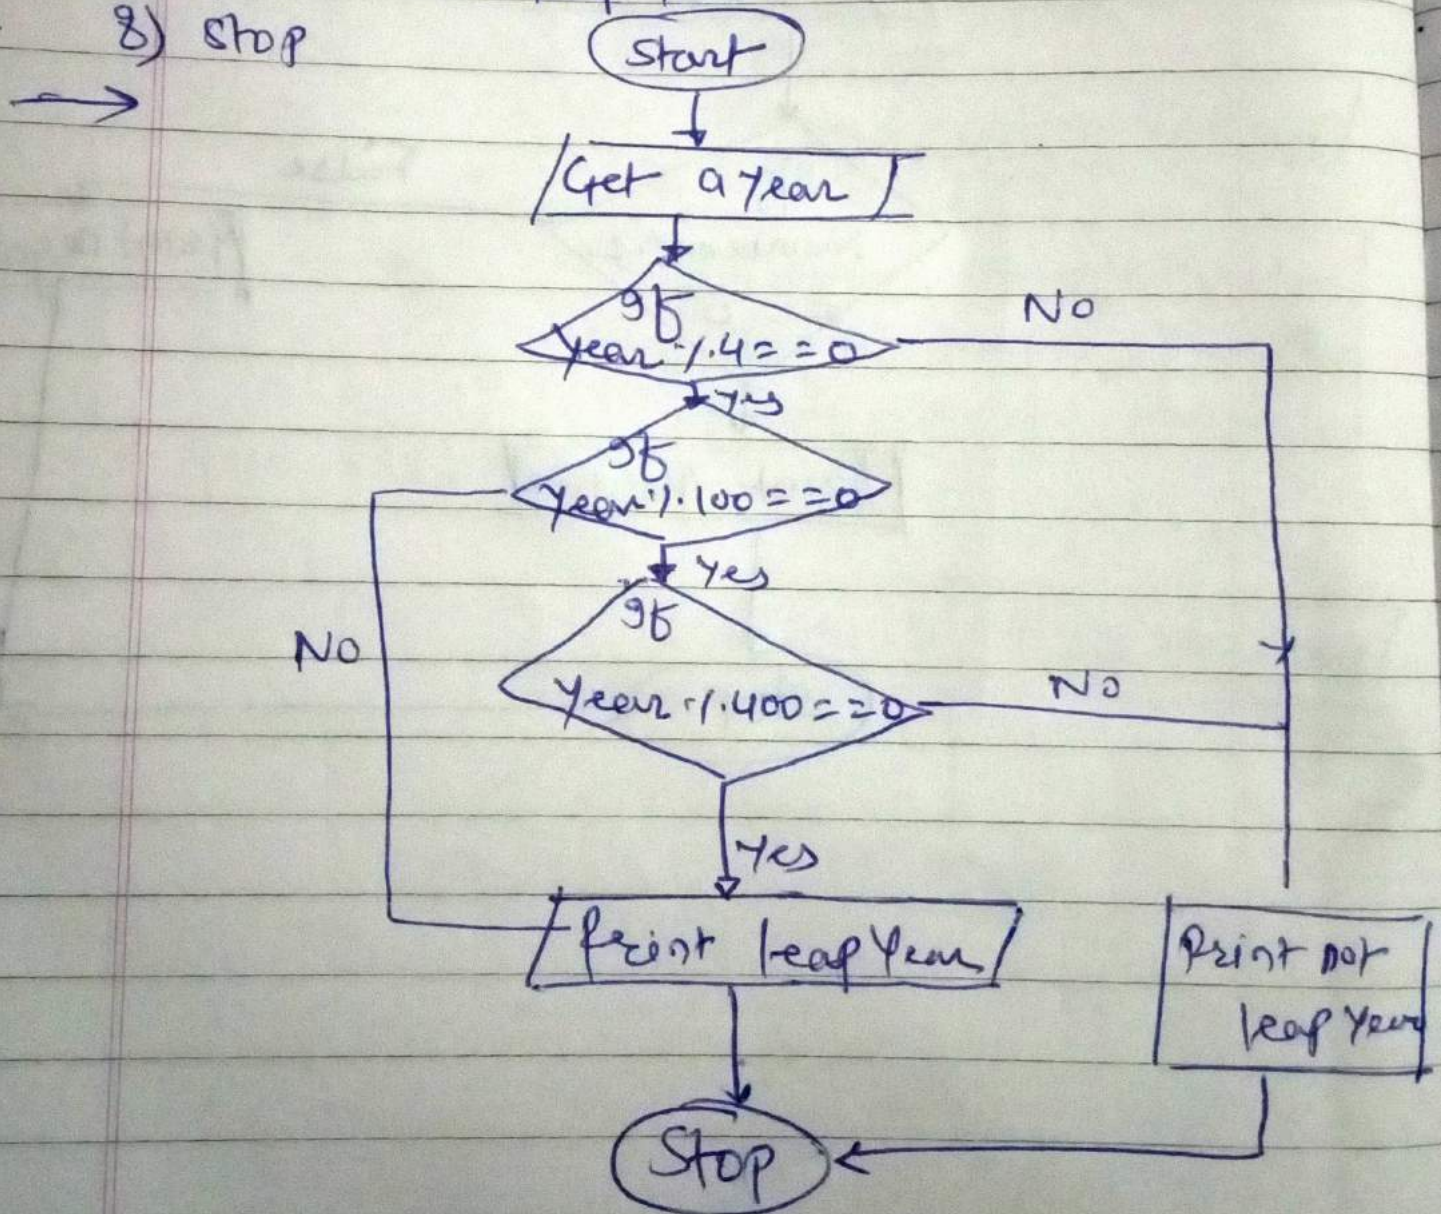

4) check Year divisible by 400, if true go to
step 5 Else go to step 6

5) check Year divisible by 400, if true go to
step 6, Else go to step 7

6) print leap Year

7) print not leap Year

8) stop

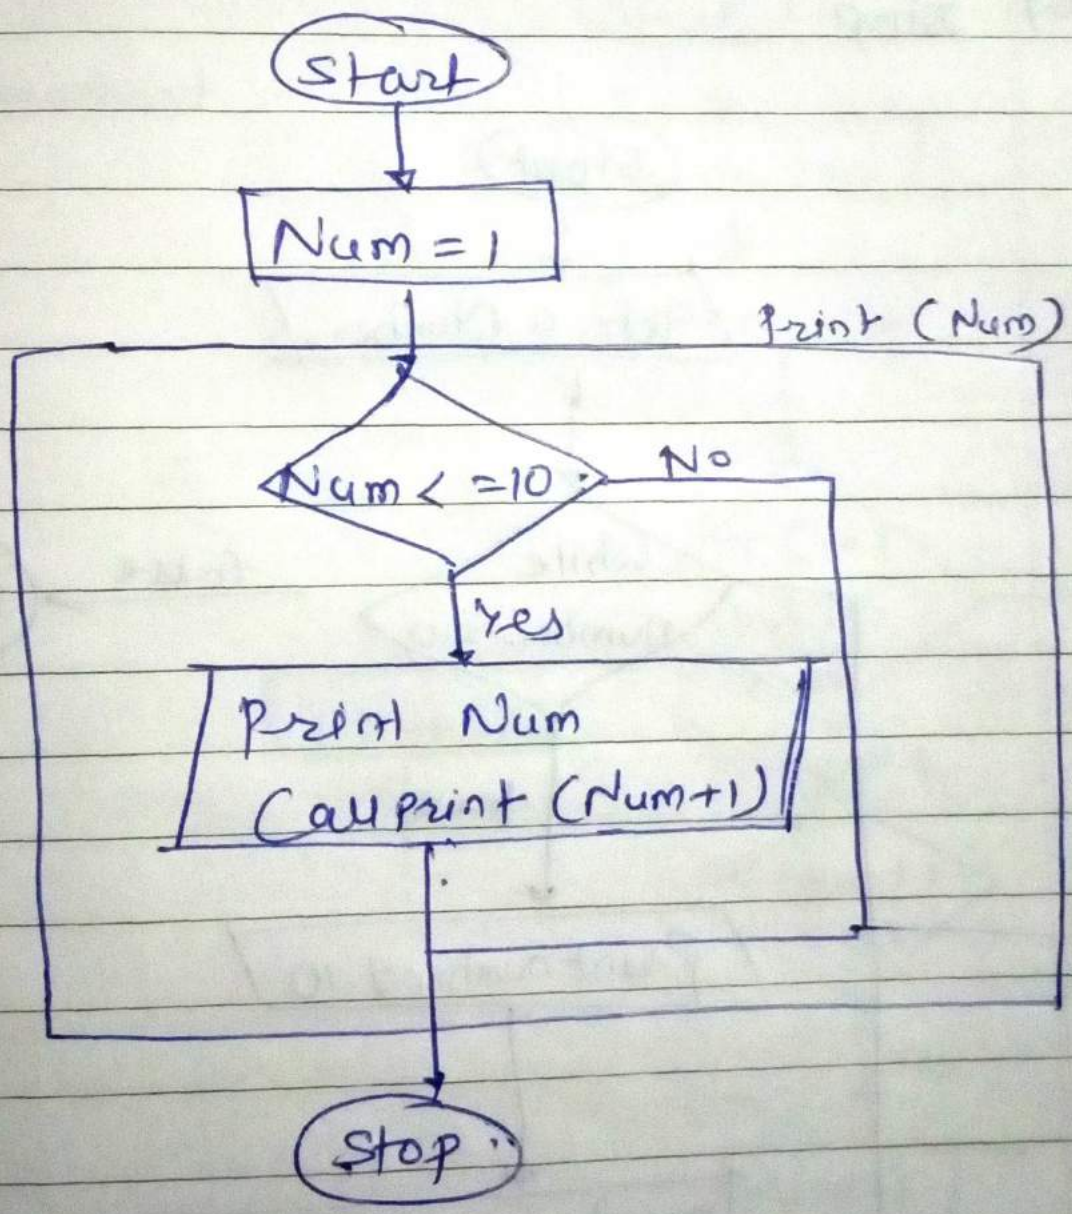

Q7) Print 1 to 10 without loop.
→ Start

1) Call print method

2) define a method print

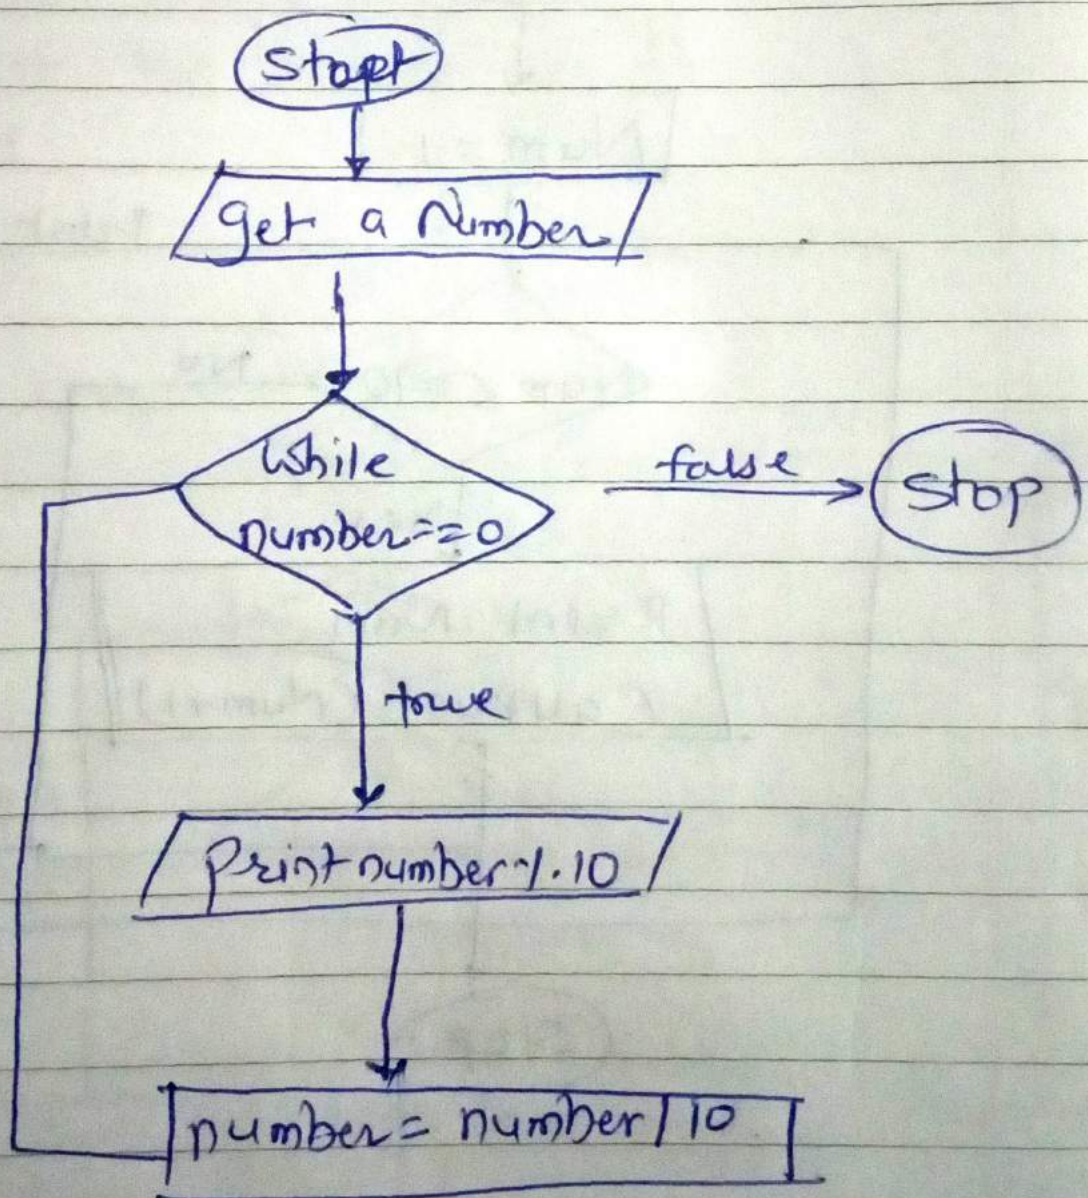

a. check $num \leq 10$ if true print and recursively call print method with $num-1$ else exit

3) Stop

Q8) Print digit of given number
→ Algorithm:-

- 1) Start
- 2) Get a number
- 3) Print the value of $\text{number} \% 10$
- 4) $\text{Number} = \text{Number} / 10$;
- 5) Repeat Step 3 to 4 until number is not equal to zero
- 6) Stop

Q9) Factor of given number

→ 1) Start

2) get a number

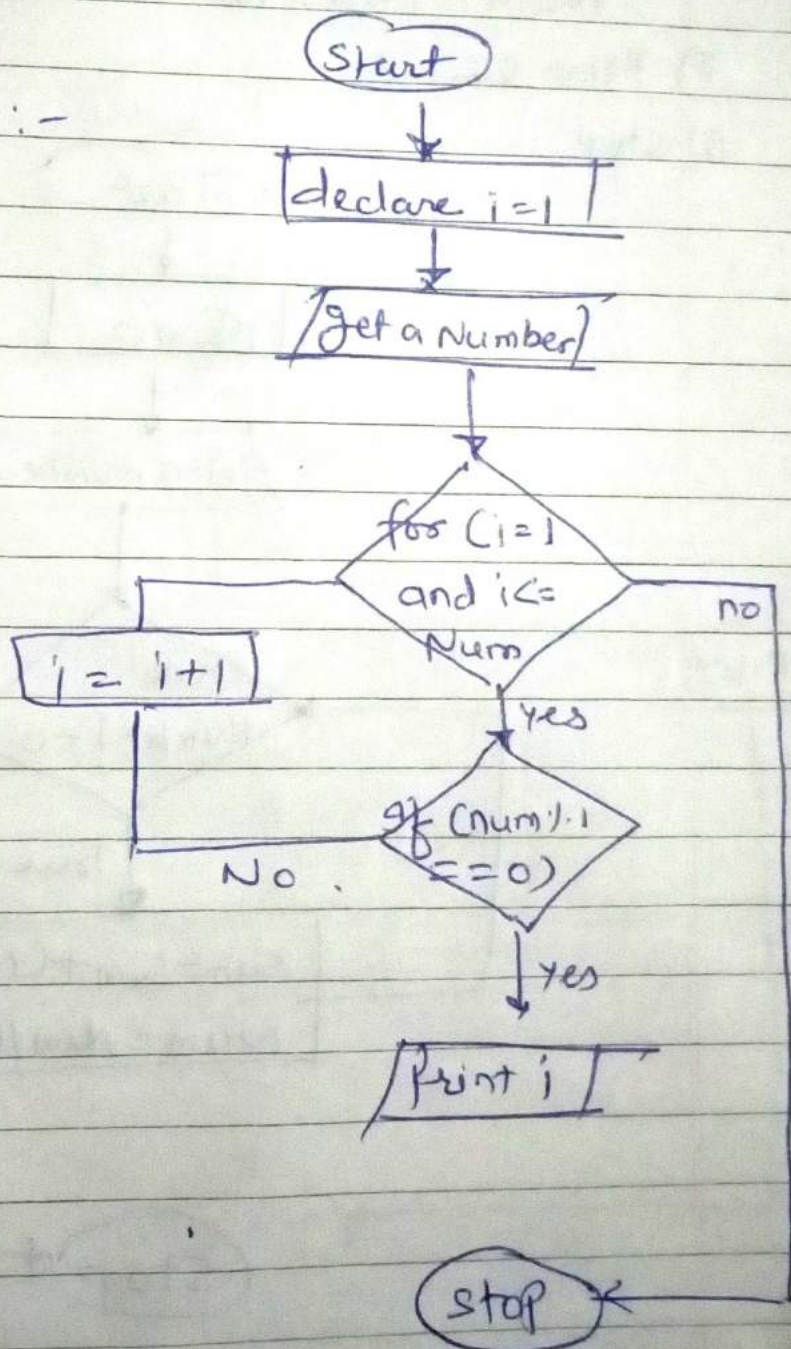

3) Declare $i = 1$

4) check number $\% i == 0$ if true print i and increment the value of i

5) Repeat Step 4 until $i \leq \text{number}$

6) Stop.

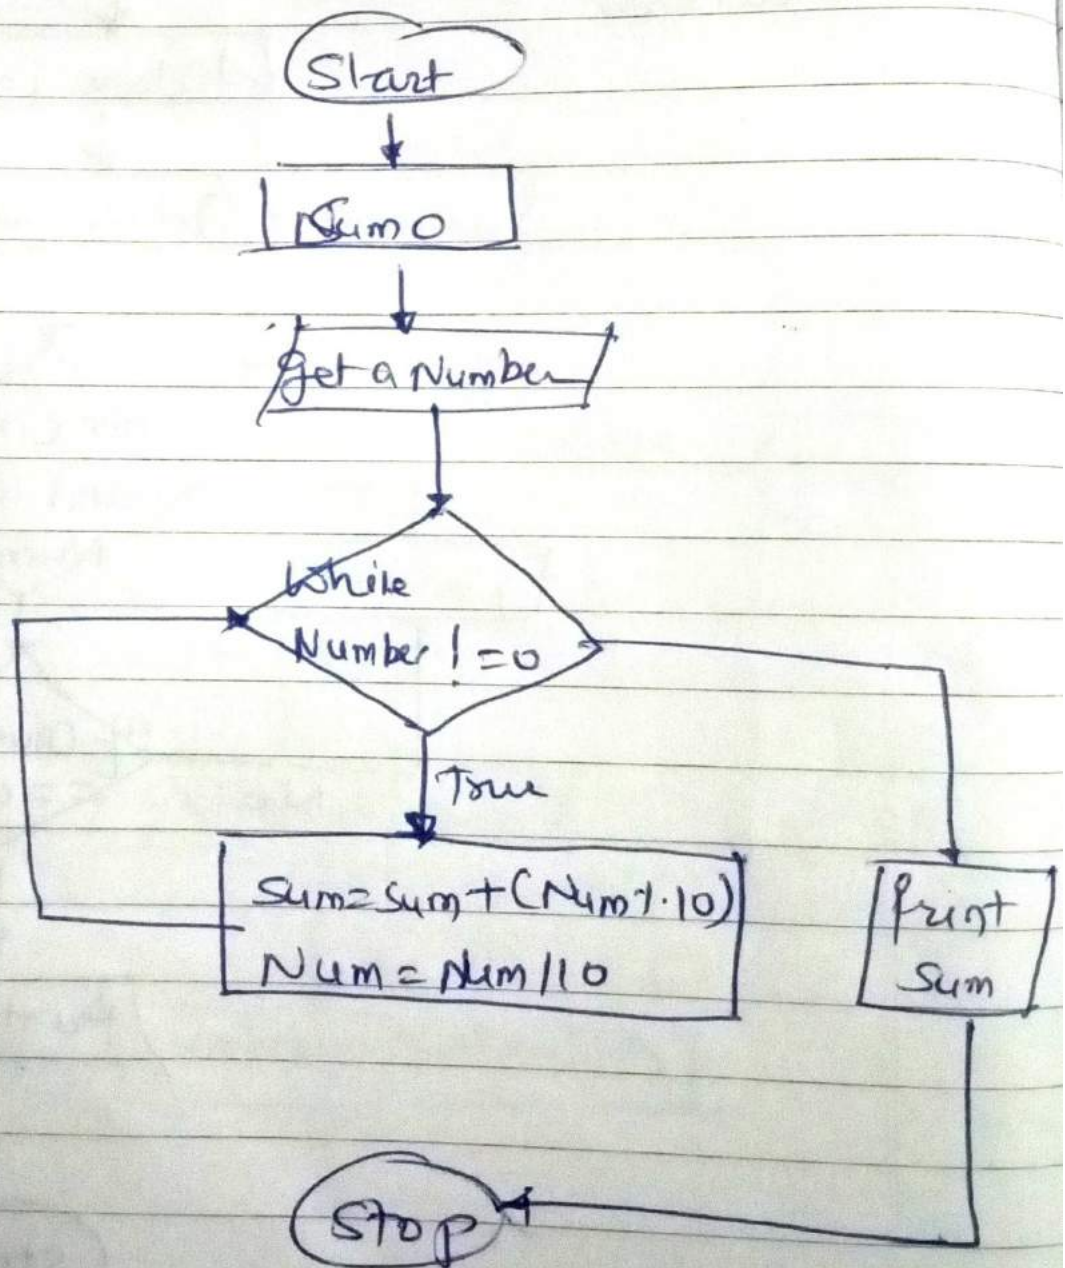

Flowchart :-

Q10) Sum of digit of given number

→ Algorithm:-

- 1) Start
- 2) get a number
- 3) Set num = 1
- 4) While (Number \neq 0)
 $sum = sum + (Number \% 10)$
 $Num = Num / 10$
- 5) Print sum
- 6) Stop

(Q1) Smallest of three Number
 → 1) start

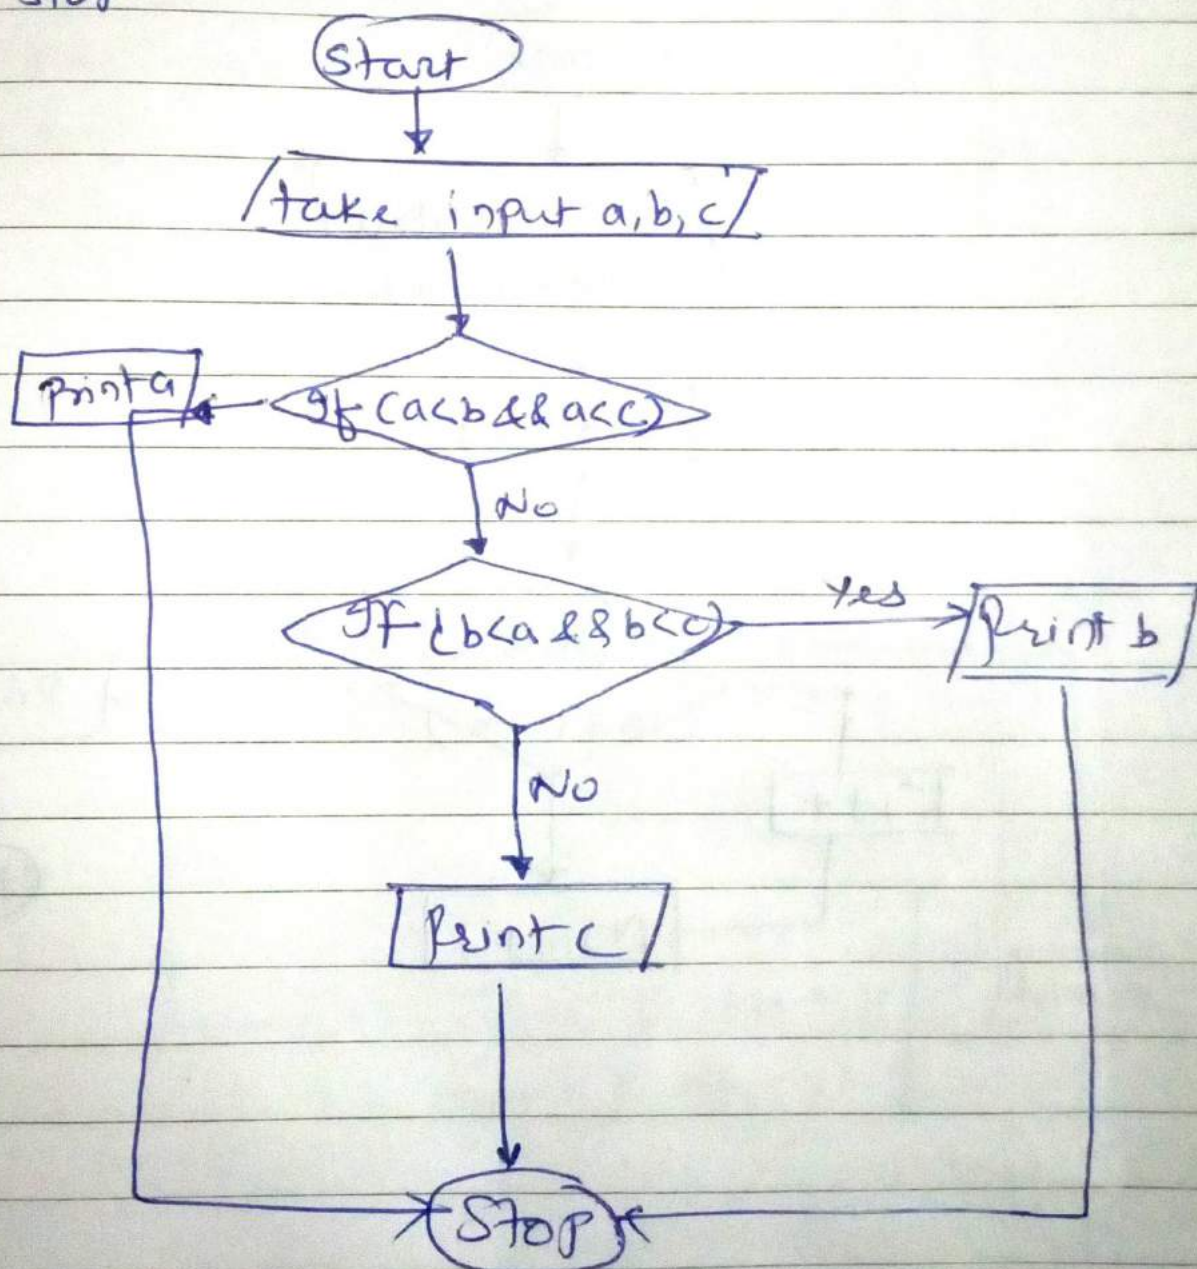

2) get three numbers from user

3) check if $a < b$ and $a < c$, if true Print a & exit else go to Stop 4

4) check if $b < a$ and $b < c$ if true Print b and exit else go to stop 5

5) Print c

6) stop

Q 72) Addition without arithmetic operator

→ 1) Start

2) get two number

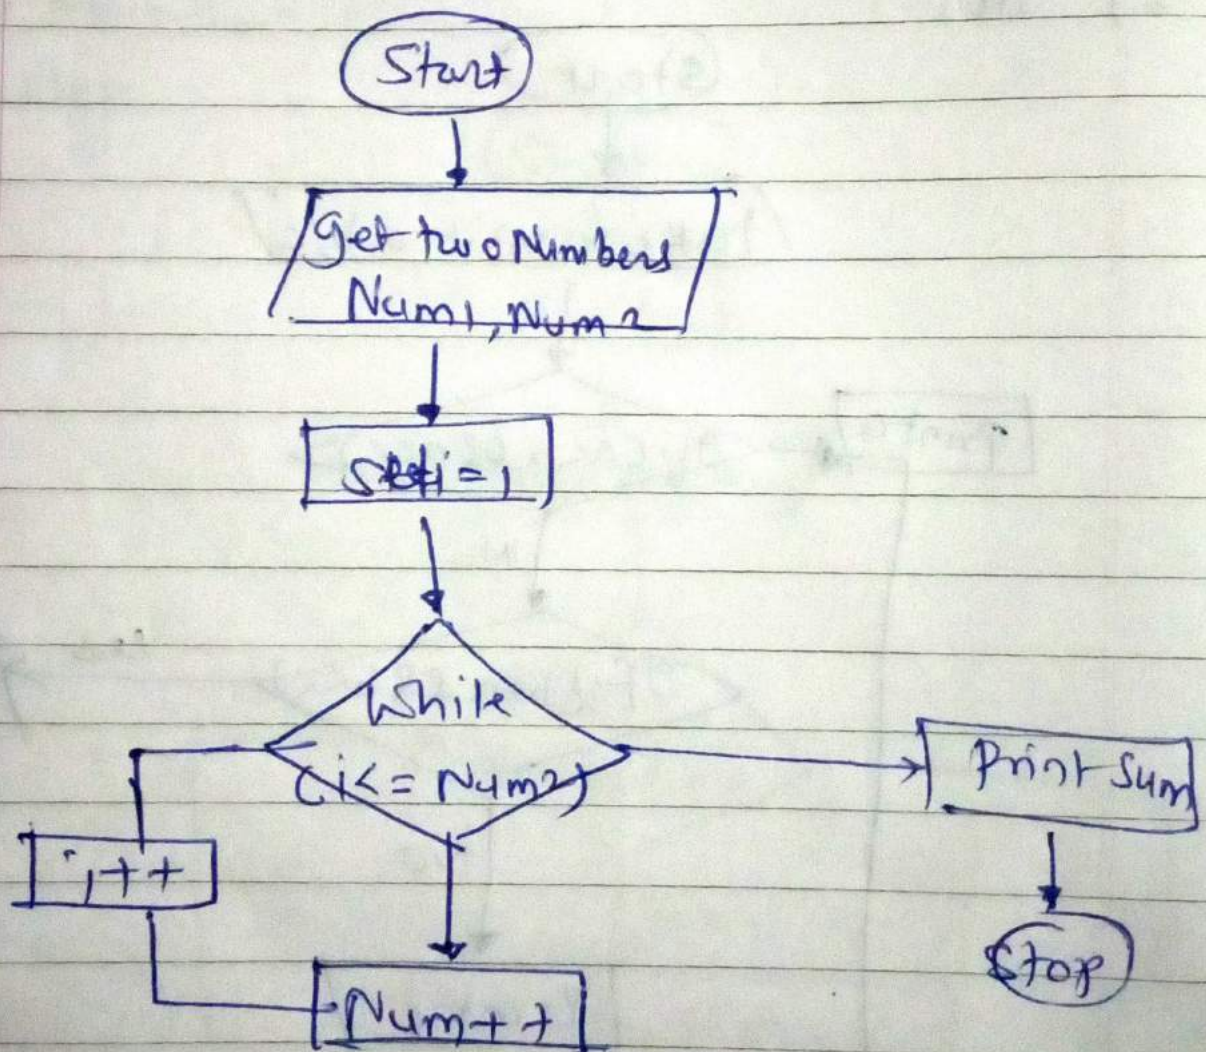

3) Call add num(Num1, Num2) method

4) for (i=1; i ≤ Num2; i++)

a Num1++

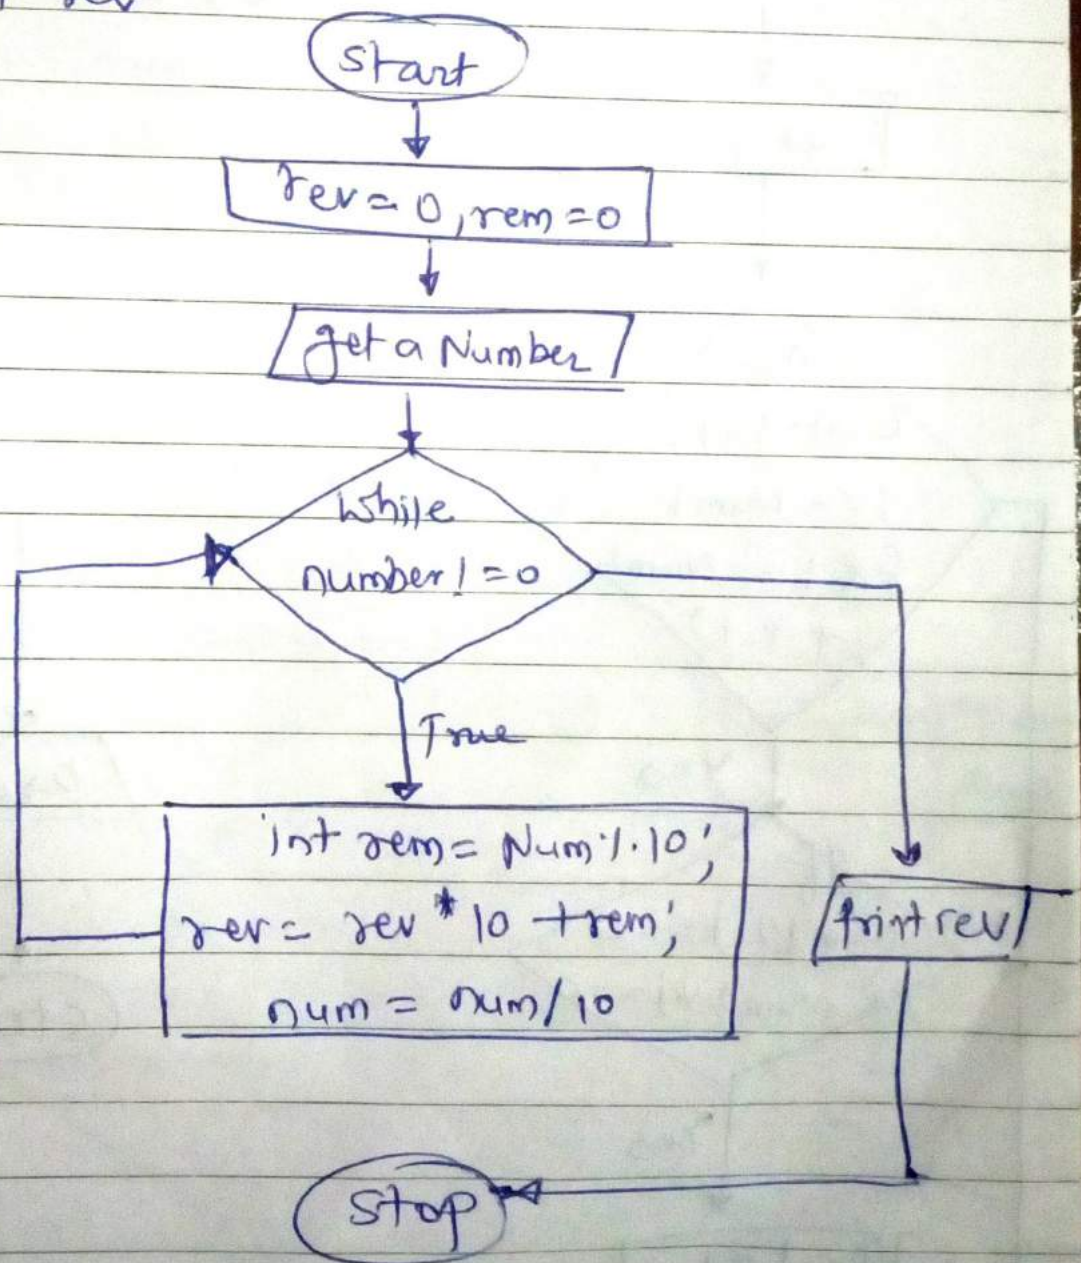

5) Print Sum

6) Stop

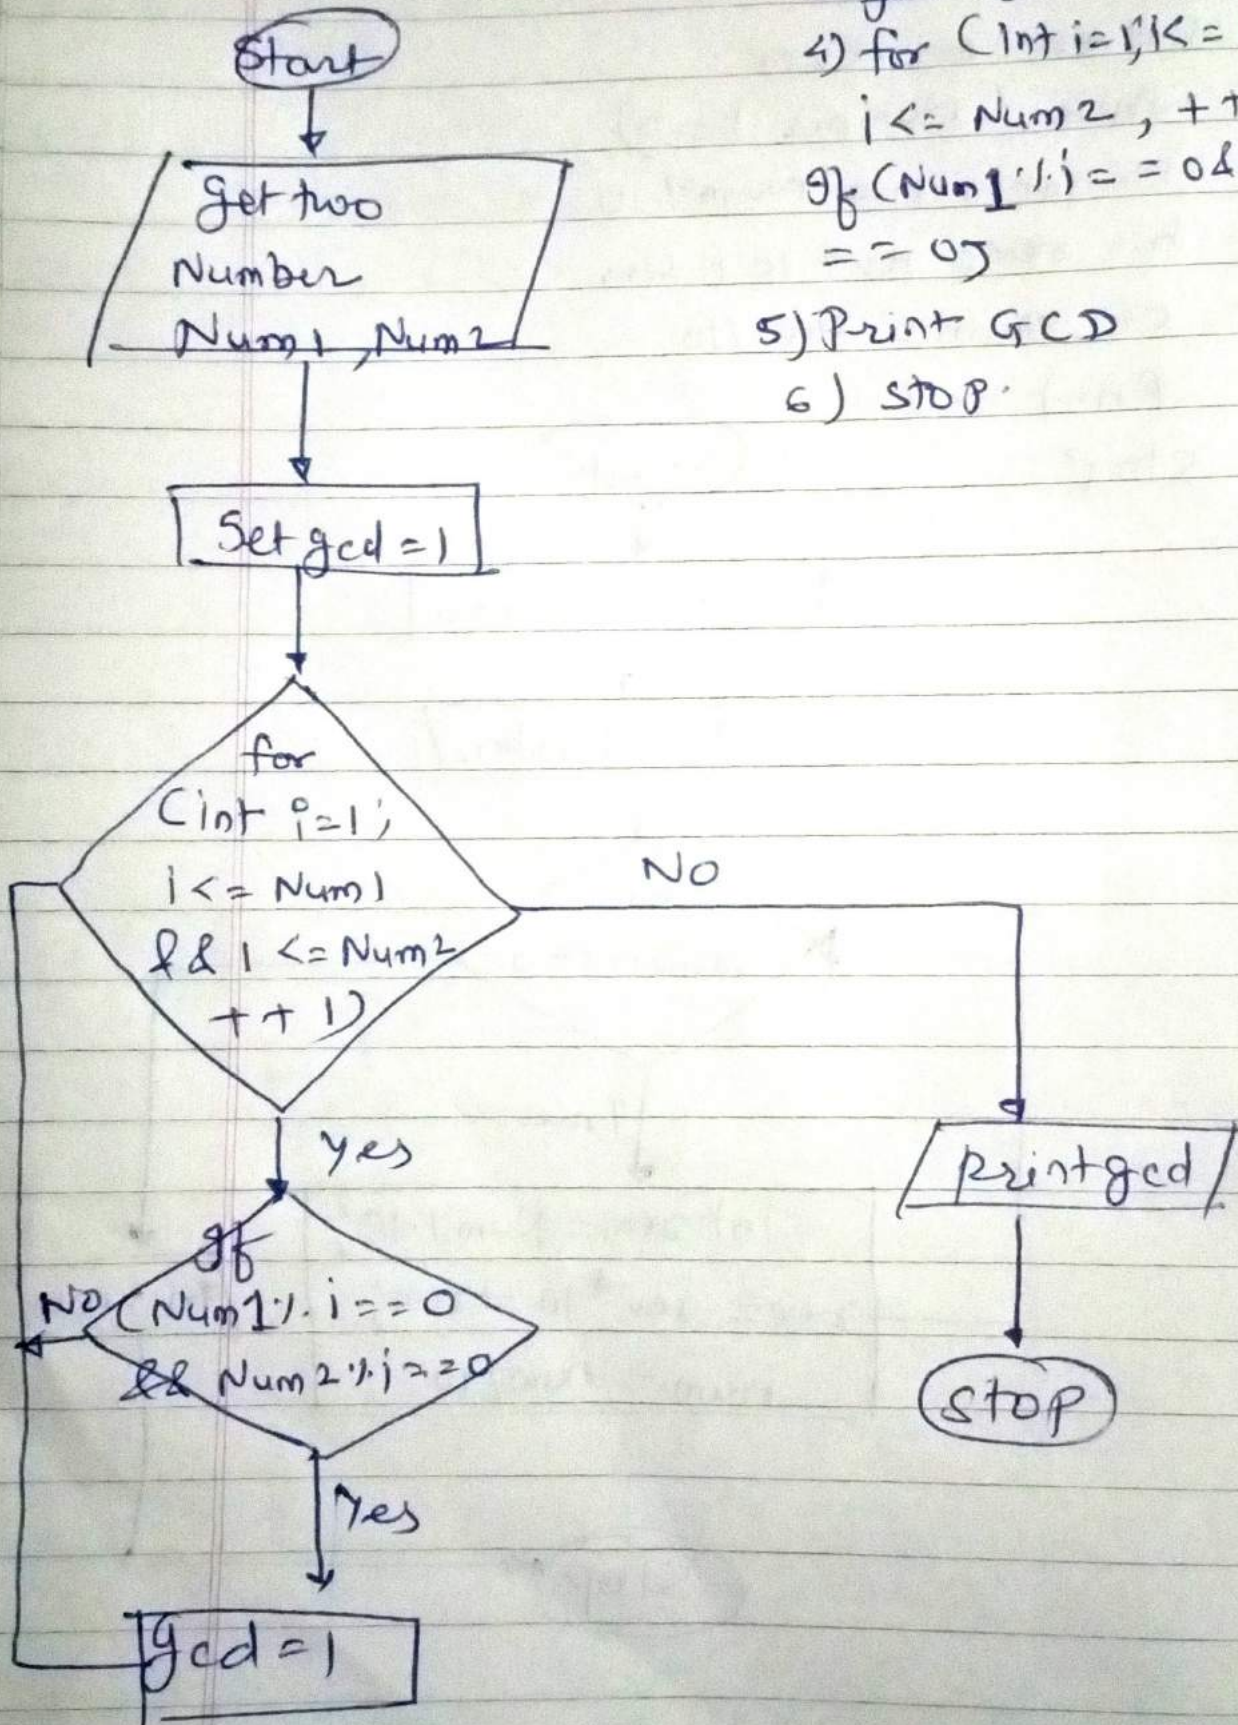

13) Reverse a given Number
→ Algorithm.

- 1) Start
- 2) Get a number
- 3) set $rem = 0$, $rev = 0$
- 4) While ($Number \neq 0$)
 - a. $int\ rem = Num \% 10$
 - b. $rev = rev * 10 + rem$
 - c. $Num = Num / 10$
- 5) Print rev
- 6) Stop

Q14) GCD of two Number

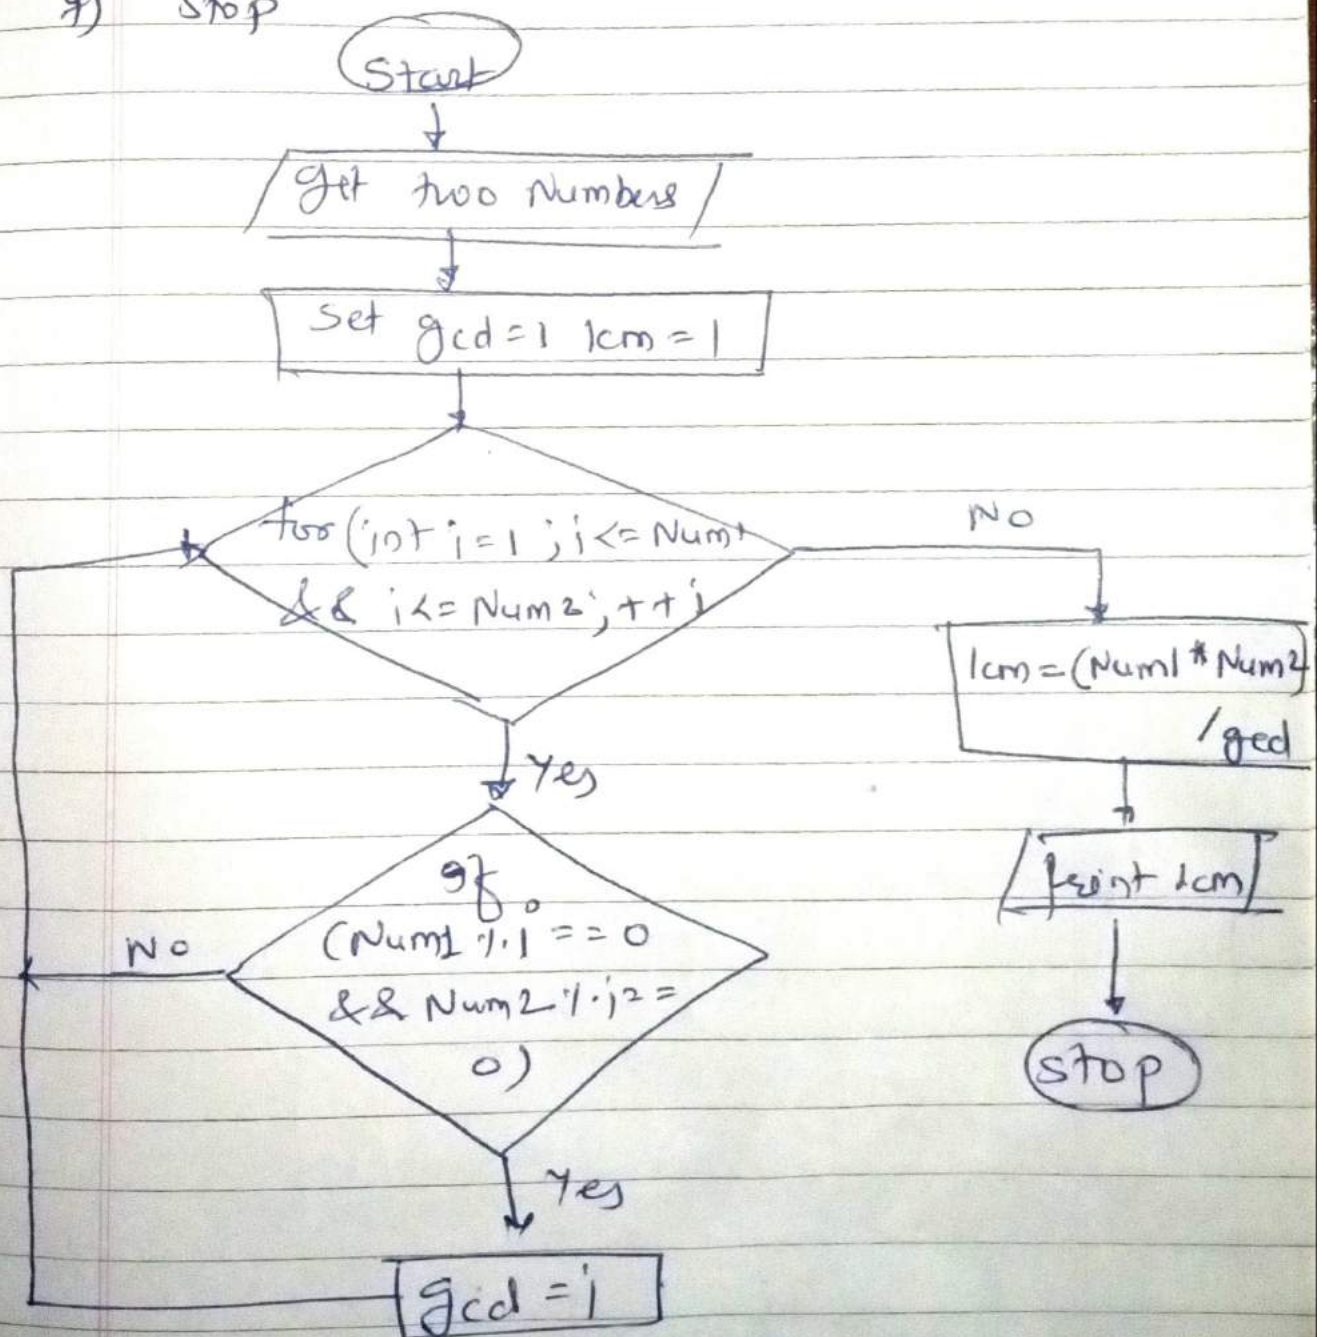

- 1) Start
- 2) get two no. Num1, Num2
- 3) get gcd = 1
- 4) for (int i = 1; i <= Num1 & i <= Num2; ++i)
if (Num1 % i == 0 & Num2 % i == 0)
- 5) Print GCD
- 6) STOP

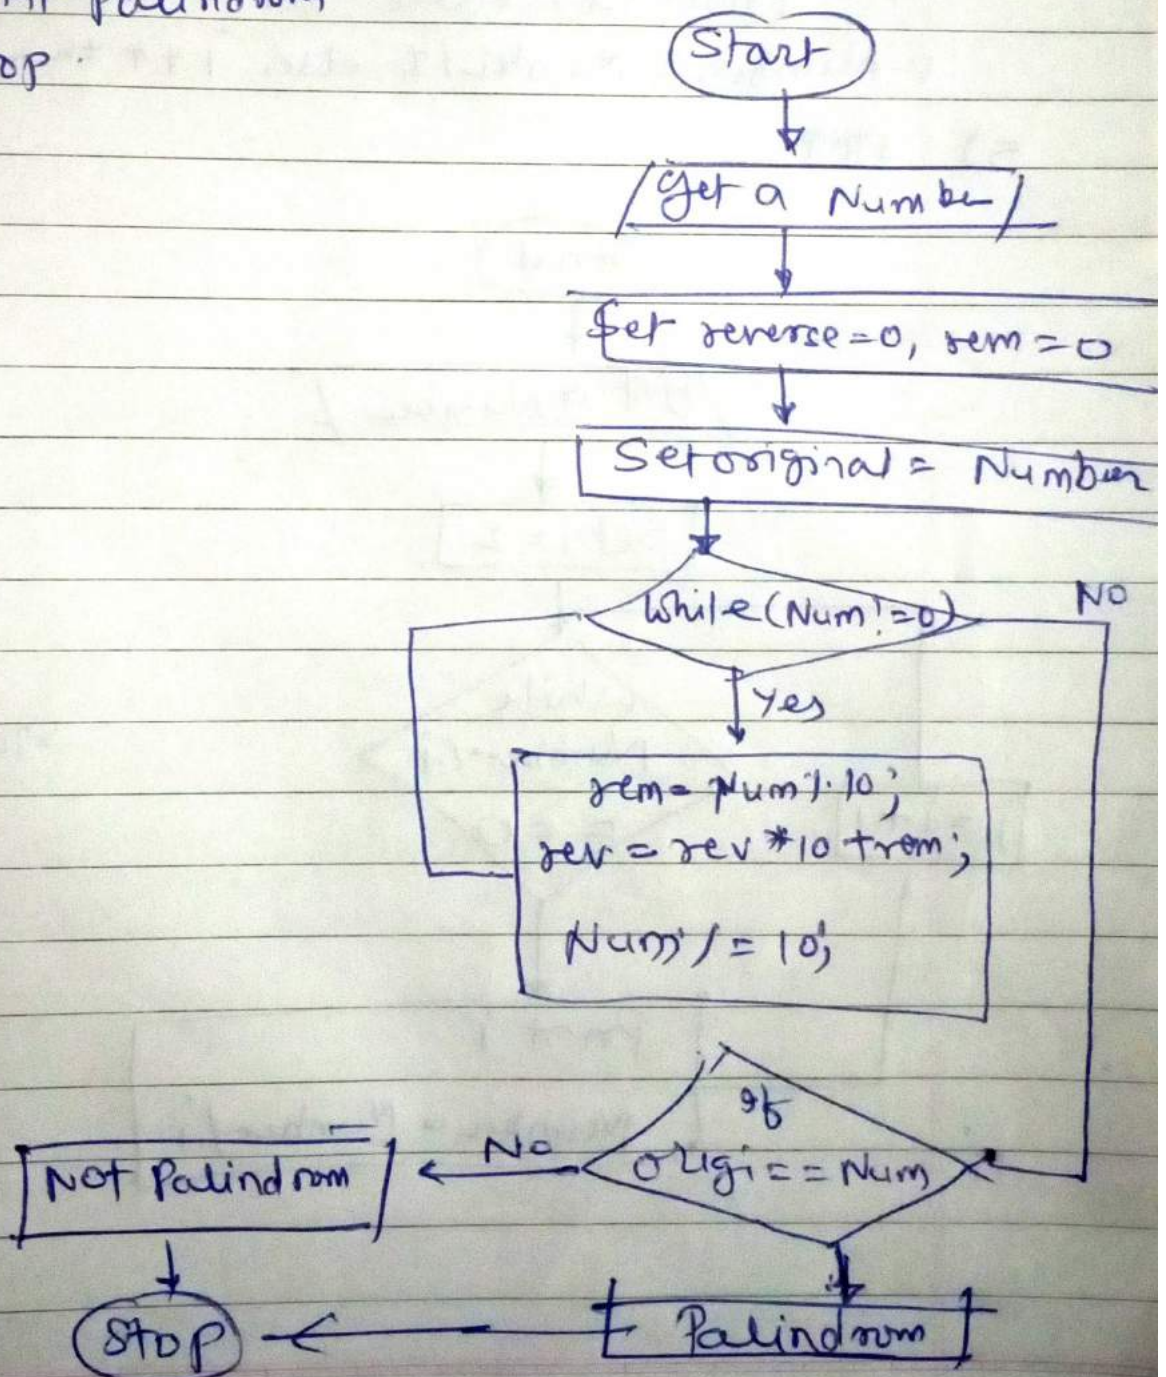

Q15) LCM of two Numbers

Ans Algorithm:-

- 1) Start
- 2) Get two number Num1, Num2
- 3) Set gcd = 1
- 4) For (int i = 1, i <= Num1 & Num2; ++i)
 if (Num1 % i == 0 & Num2 % i == 0)
- 5) lcm = (Num1 * Num2) / gcd
- 6) Print lcm
- 7) Stop

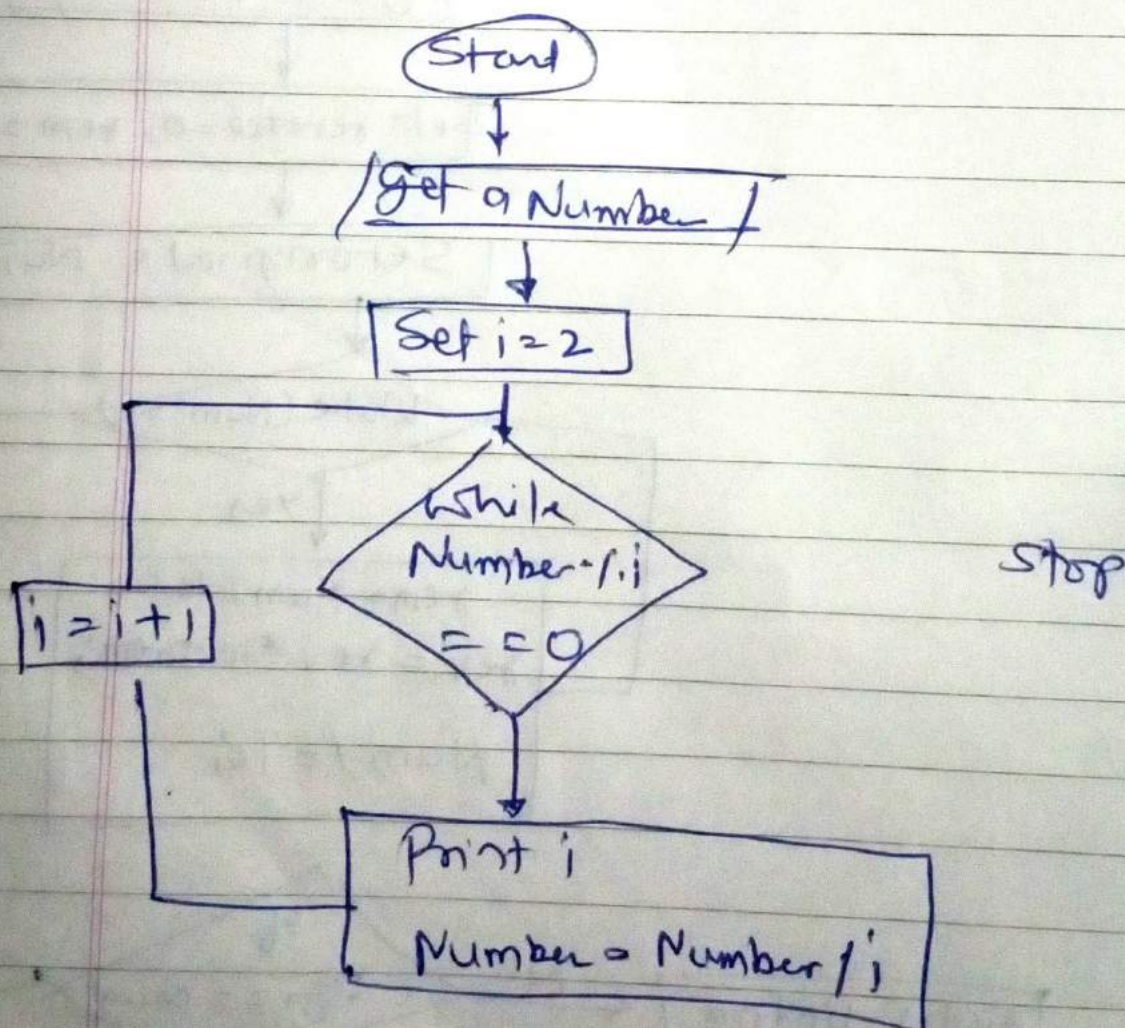

- 1) Check Palindrome or not
- 1) Start
- 2) Get a Number
- 3) reverse = 0 & rem = 0
- 4) ~~check~~ Set original = Number
- 5) Check Number / = 0 if true go to 5 else goto 7
- 6) $rem = num \% 10;$
 $rev = rev * 10 + rem;$
 $Num /= 10;$
- 7) check if original == number if true
 Print Palindrome
- 8) Stop

1a) Prime factor of given Number

→ Algorithm.

- 1) Start
- 2) Enter the Num.
- 3) take $i = 2$
- 4) Check the input Number
is greater than enter in loop.
 - a. while (Number is greater than 1)
 - b. Check the condn If (Num % i == 0)
 - c. If it is true enter in bracket.
 - d. Print (i) value on terminal
 - e. Number = Number / i else $i++$ then loop will
- 5) stop

13) Even Series

→ Start

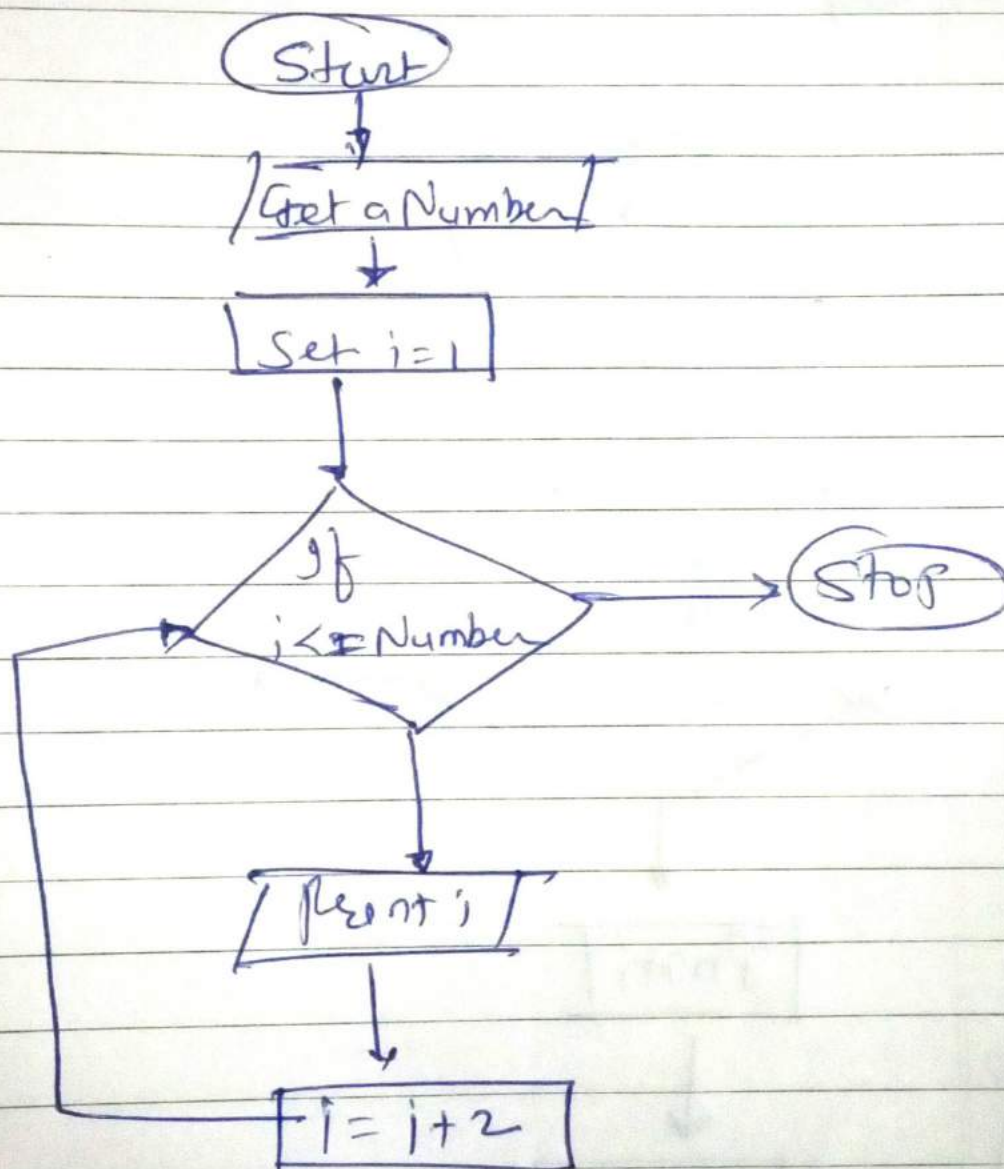

2) get a Number

3) set $i = 2$

4) $i \leq \text{Number}$ print i & $i = i + 2$

5) repeat step 4 until $i \leq \text{Number}$

6) Stop

20) Odd series

→ Algorithm:-

- 1) Start
- 2) get a Number
- 3) Set $i = 1$
- 4) If $i \leq \text{Number}$ print i & $i = i + 2$
- 5) repeat Step 4 until $i \leq \text{Number}$
- 6) Stop
